*Expert and Unbiased IT Infrastructure Consulting*

**Scios, Inc.**  
Fremont, CA

## PROJECT DESCRIPTION

IT Infrastructure Consulting and Project Management

Data Center Design and Budgets

Data Center Build Project Management

## OVERVIEW

Scios, Inc., a wholly owned subsidiary of Johnson & Johnson, is involved in developing new treatments for cardiovascular and inflammatory diseases and is best known for its flagship product, Natrecor, an intravenous genetically engineered hormone that helps open arteries and veins in congestive heart failure patients. Scios made plans to move their Sunnyvale offices to two large buildings in Fremont.

## THE CHALLENGE

This move required extensive improvements, including rebuilds of the data center, PBX room, Intermediate Distribution Frames (IDF) rooms, Uninterruptible Power Supply (UPS) room and MPOE rooms. The building had outside plant wiring—both copper and fiber—between them valued at several hundred thousand dollars. The company wanted to utilize the existing infrastructure assets wherever possible. The challenge was that there were no original “as-built” drawings available for reference, so these had to be recreated. Scios also needed an evaluation of the existing telecommunications infrastructure and a detailed budget for required modifications.

## THE SOLUTION

In order to meet the relocation schedule, **TELADATA** was asked to create the infrastructure “as built” drawings of the current Fremont facility. **TELADATA’s** detailed drawings confirmed that much of the existing infrastructure in the new location was appropriate for Scios’s mission-critical requirements, thus saving the company hundreds of thousands of dollars. After detailing existing conditions, **TELADATA’s** engineers and project managers prepared preliminary designs and budgets for the modifications necessary to meet the client’s data and voice communications needs. **TELADATA** then stepped in as the lead project manager for the modifications and coordinated the move of servers and network into the new location.
